Laurent Kodjikian: Consultant: AbbVie, Alcon, Allergan, Bayer, Krystal Biotech, Novartis, Regeneron, and Théa.

Adrian Koh: Consultant: Allergan, Bayer, Carl Zeiss, Heidelberg, Novartis, and Topcon.

Winfried M. Amoaku: Advisory board membership: AbbVie, Alcon, Alimera, Allergan, Apellis, Bayer, Bausch + Lomb, Bioeq, Novartis, and Pfizer; Speaker fees: Alimera, Allergan, Bayer, Novartis, and Pfizer; Support for travel: Alimera, Allergan, Bayer, Novartis, and Pfizer; Research sponsorship and funding: Allergan, Bayer, Boehringer Ingelheim, CenterVue, Gyroscope, Novartis, and Optos.

Tariq Aslam: Consultant: Bausch & Lomb, Bayer, Laboratoires Théa Pharmaceuticals, Novartis, Oraya, and Roche.

Jane Barratt: Consultant: Bayer.

Gemmy C.M. Cheung: Financial support (to institution): Allergan, Bayer, Boehringer Ingelheim, Novartis, Roche, Topcon, and Zeiss; Stock: Avirmax.

Bora Eldem: Consultant: Allergan, Bayer, Novartis, and Roche.

Robert P. Finger: Research grant: CentreVue, Heidelberg Engineering, Novartis, and Zeiss; Consultant: Alimera, Allergan, Bayer, Ellex, Inositec, Novartis, Opthea, Roche/Genentech, and Santhera; Support for travel: Novartis.

Richard P. Gale: Consultant/advisory boards: Allergan, Alimera, Bayer, Novartis, and Santen; Educational travel grants: Allergan, Bayer, Heidelberg, and Novartis; Research grants: Allergan, Bayer, Novartis, and Roche.

Jean-François Korobelnik: Consultant: AbbVie, Apellis, Bayer, Carl Zeiss Meditec, Eyepoint Pharma, Ocuphire, Roche, and Thea; Member of Data Safety Monitoring Board: Alexion, Novo Nordisk, and Opthea.

Xiaofeng Lin: Consultant: Bayer.

Anat Loewenstein: Consultant: 4DMT, Alkeus, AbbVie, Annexon, Apellis, Astellas, Bayer, Beyeonics, Eyepoint, Johnson & Johnson, Notal Vision, Novartis, Ocular Therapeutics, Oculis, Ocuphire Pharma, Ocuterra, Opthea, Oxurion, Roche, and Syneos.

Paul Mitchell: Consultant: Allergan, Bayer, and Novartis; Steering Committee member: Bayer.

Moira Murphy: Employee: Exploristics, Ltd.

Mali Okada: Non-financial support and personal fees: Bayer.

David R. Owens: Consultant: Bayer.

Nick Parker: Employee: The International Agency for the Prevention of Blindness.

Ian Pearce: Lecture fees: Allergan, Bayer, Heidelberg, and Novartis; Consultant: Allergan, Alimera, Bayer, and Novartis; Support for travel: Allergan, Bayer, and Novartis.

Francisco J. Rodriguez: Consultant: Bayer, Novartis, and Roche; Speaker: Bayer, Novartis, and Roche; Research funding: Novartis.

Jude Stern: Employee: The International Agency for the Prevention of Blindness.

Michelle Sylvanowicz: Employee: Bayer.

S. James Talks: Advisory board member, speaker fees, and research support: Bayer and Novartis; Research grants: Boehringer Ingelheim and Roche; Consultant: Bayer.

Raul Velez-Montoya: Consultant: Abbott, Bayer, Novartis, RevOpsis, Roche, and Sun Pharma; Advisory Board member: Bayer.

Tien Yin Wong: Consulting fees/travel support/review fees: Aldropika Therapeutics, Bayer, Boehringer-Ingelheim, Genentech, Iveric Bio, Novartis, Oxurion, Plano, Roche, Sanofi, and Shanghai Henlius; Stock: EyRIS.

Focke Ziemssen: Travel grants and personal fees: Allergan, Alimera, Bayer Healthcare, Biogen, Boehringer Ingelheim, Clearside, Novartis, Novo Nordisk, MSD Sharp & Dohme, Roche, and Optos.

David T. Wong: Grants/research support: Bayer, Novartis, and Roche; Consultant: Alcon, Allergan, Apellis, Bausch Health, Bayer, Novartis, Roche, Topcon, and Zeiss; Equity: Arctic DX.

Acknowledgments and funding: This survey was sponsored by Bayer Consumer Care AG, Basel, Switzerland. Medical writing support, under the direction of the authors, was provided by ApotheCom and funded by Bayer Consumer Care AG, Basel, Switzerland, in accordance with Good Publication Practice (GPP4) guidance (*Ann Intern Med* 2022;175:1298–1304).

Non-adherence is a significant, ongoing problem in routine clinical practice

Challenge

- **Non-adherence to treatment** for neovascular age-related macular degeneration (nAMD) impacts patient outcomes¹
- **Identifying patients at risk of non-adherence** could help improve real-world outcomes

Approach

The Barometer Global Survey was a **worldwide survey of patients with nAMD** to:

- **Quantify known and unknown barriers to treatment**
- **Identify challenges and opportunities** that could be addressed with meaningful interventions to improve patient outcomes^{2a}

Objective

Using Global Survey data, to:

- **Characterize factors associated with non-adherence**
- Understand and identify where patients receiving treatment for retinal diseases could require additional support to maintain adherence

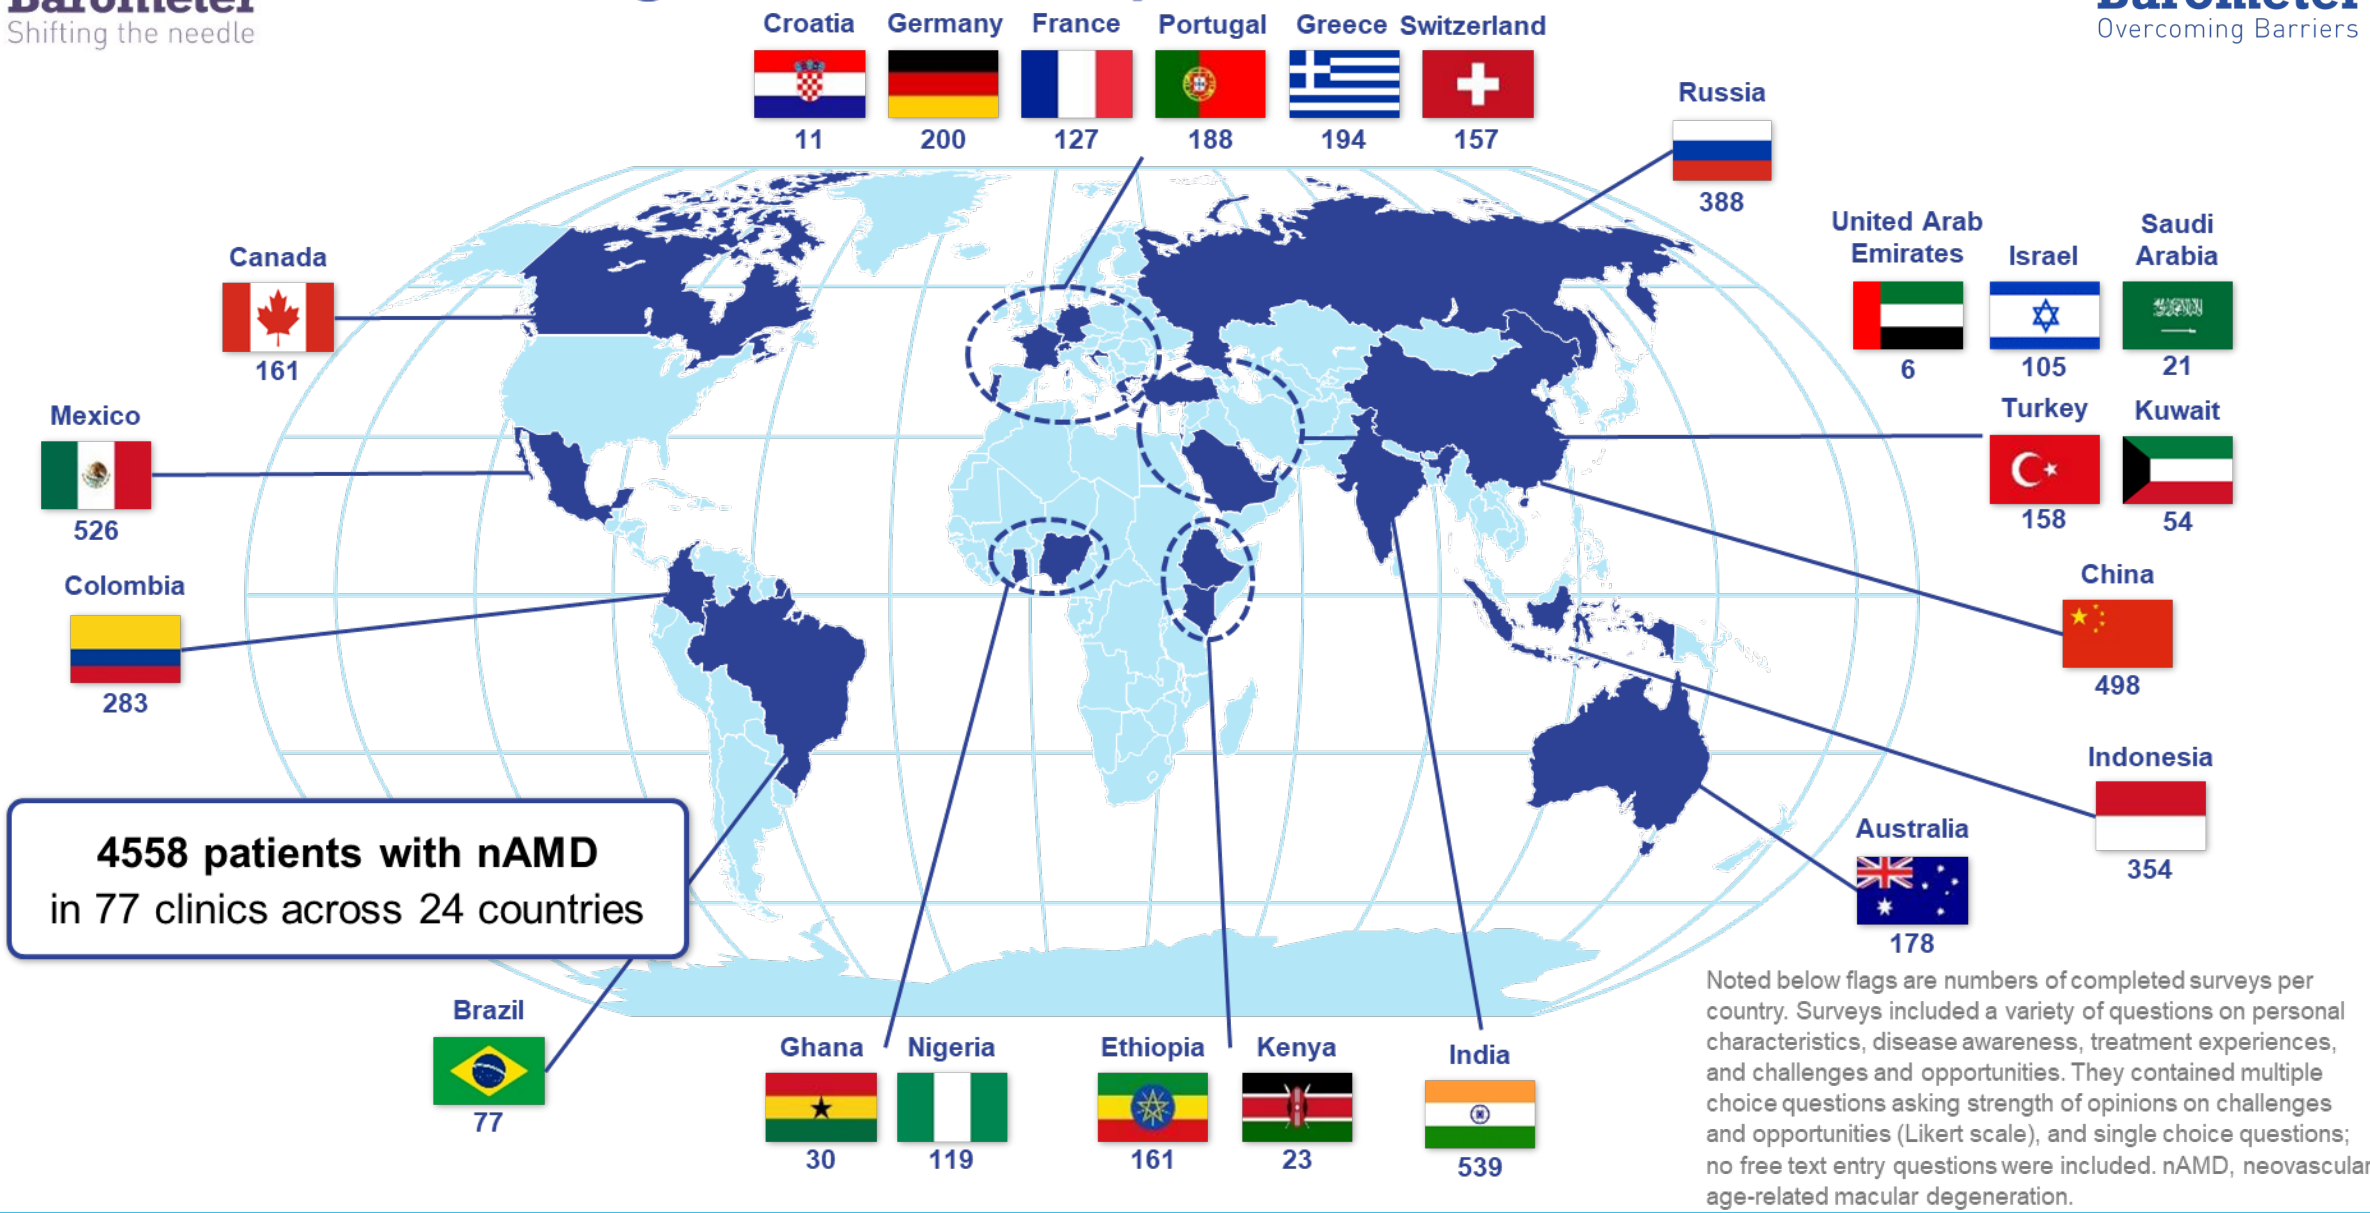

Hypothesis

- **Certain modifiable and non-modifiable risk factors** may be more prevalent in non-adherent versus adherent patients with nAMD

^aThe Barometer Global Survey also assessed patients with DME, patients with DR, and their respective healthcare providers and clinic staff, in addition to healthcare providers and clinic staff of patients with nAMD. Surveys were provided within clinics and could be completed with support if required. DME, diabetic macular edema; DR, diabetic retinopathy; nAMD, neovascular age-related macular degeneration.

A global cohort of patients with nAMD

Exploratory statistical analysis to identify factors affecting adherence

Factor analysis

Identified 19 variables (factors) explaining >60% of the interrelationships between Likert scale questions and answers

Common themes were applied:

Usefulness of information sources

Attending appointments

Doctor/patient relationship

Concern of losing vision

Treatment acceptance

Treatment needs and concerns

Worry of vision changes between appointments

Regression analysis

Identified participant characteristics associated with non-adherence, classified per previously-published definitions:¹

Non-adherent

Missed ≥ 2 appointments over a 12-month period¹

Odds ratios

Used to quantify the association between the factors & non-Likert scale questions, and nAMD patient characteristic profile of adherence

Treatment burden

Odds ratio
(95% CI)

Self-pays their treatment
(vs. covered by insurance)

2.5 (1.6–3.7)

nAMD diagnosed by their family doctor/GP
(vs. diagnosed by the doctor currently treating their nAMD)

3.0 (1.4–6.6)

Received 4–10 injections
(vs. ≤3 injections)

1.6 (1.2–2.3)

Received 41–60 injections
(vs. ≤3 injections)

3.6 (1.6–8.3)

Delay between 2 weeks to 2 months between diagnosis and first treatment
(vs. no delay)

1.7 (1.2–2.4)

0 1 2 3 4 5 6 7 8 9

Odds ratio

Contributes to non-adherence

Odds ratios are displayed with 95% CI. Only factors with non-overlapping CIs (i.e., not overlapping 1) are displayed.

The reference group for each characteristic is stated in brackets. CI, confidence interval; GP, general practitioner; nAMD, neovascular age-related macular degeneration.

Level of information

Receipt of partial messages or unclear information on disease and treatment
(vs. received clear information)

Odds ratio
(95% CI)

1.7 (1.2–2.4)

Wanted more information on the risk that nAMD could result in vision loss
(vs. no information needs)

2.6 (1.6–4.5)

Disease characteristics

Has bilateral nAMD
(vs. unilateral nAMD)

1.7 (1.3–2.2)

0 1 2 3 4 5 6 7 8 9

Odds ratio

Contributes to non-adherence

Summary of key points

- ✓ The likelihood of non-adherence increases with the number of injections, indicating that longer treatment durations could permit more opportunities for absenteeism
- ✓ A patient is more likely to be non-adherent if they have bilateral nAMD, versus having unilateral nAMD, demonstrating that an increased disease burden is associated with non-adherence

Building on prior evidence to identify factors likely to lead to non-adherence

Identifying patient characteristics and challenges that may be associated with non-adherence allows clinicians to recognize patients at risk of non-adherence and **provide further support** before these patients begin to miss appointments

A systematic literature review found that **fear of injections, insufficient clinic capacity, and lack of accompanying people** contributed to non-adherence¹

In the Barometer Global Survey, **over 40% of patients reported treatment, appointment, logistical, or financial burdens** related to their nAMD that made appointment attendance difficult²

This analysis identified **treatment burdens, levels of treatment- and disease-related information received, and disease characteristics** that increase the risk of non-adherence

These findings aligned with the literature, and the **broad and diverse population** indicates the systematic data from this study are **robust and generalizable**

These insights into characteristics affecting patient adherence can be employed to **build a profile of the potentially non-adherent patient with nAMD** that clinicians can use to identify those **who may require more support** to stay on treatment

It is important to understand how to **address modifiable factors, or provide additional support for non-modifiable factors, that affect adherence** to:

- Provide individualized support, e.g., coordinating injections with other hospital appointments
- Prevent non-adherence, leading to improved vision and quality of life
- Optimize clinic set-up to remove barriers leading to non-adherence, e.g., appointment reminders

Future analyses are planned to understand **factors affecting adherence in patients with DME**
